[TX3] InSuite™

The most versatile and full featured solution for multi-residential condominiums and homes.

Remote Access: Message center to record and play back audio or video messages placed by visitors from smart phone.

Intuitive InSuite Station provides a built-in camera, two-way audio/video communications and three customizable illuminated function buttons.

TX3 InSuite Station is a new platform for building and community services. The innovative tablet-like device is designed to send and receive audio and video signals, browse the internet, run other software applications and accept various hardware modules to integrate a variety of wireless devices. The TX3 InSuite is 100% designed and built by Mircom in Canada.

Mircom™

TX3 InSuite Touch Station's open architecture can accept any third party software for:

Lighting Control HVAC control, power management, security and sprinkler systems.

System Integration (parking, video surveillance, social media, mass notification, fire alarm annunciation).

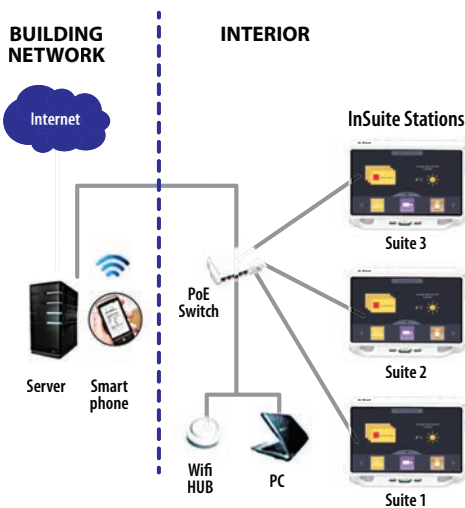

Door Control Security to lock and unlock main building doors plus wireless support for appliances and wireless locks (Zigbee, Z-Wave & More).

Video Intercom to screen visitors and control access to the premises as well as communication within the building to visitors and other occupants.
